

AEAF

AEAF at a Glance

Author: Latentti Oy

Date: May 2026

The Agentic Enterprise Architecture Framework — a TOGAF-class enterprise-architecture framework for the enterprise where humans and AI agents work as a *blended workforce*. Two volumes: **Book 1 — AEAF: The Framework** (the standard) and **Book 2 — AEAF in Practice** (the adoption guide). *Latentti Oy · May 2026.*

Classical EA assumes human actors, human readers of architecture, deterministic systems, and gated change. Autonomous agents break all four. AEAF keeps TOGAF's proven spine — governed baseline → target — and rebuilds what a non-human actor breaks.

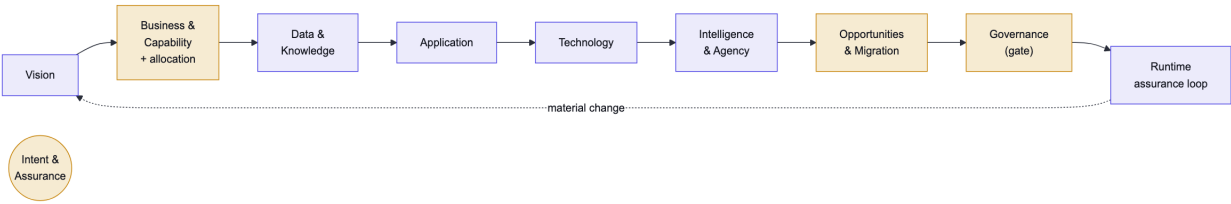

The four breaks, and AEAF's answer

CLASSICAL ASSUMPTION	WHAT BREAKS	AEAF ANSWER
Actors are human	Agents decide and act	Blended workforce: human / agent / hybrid actor model
Architecture is read by people	Agents obey it at runtime	Dual-audience principles → compiled into runtime guardrails
Systems are deterministic & specifiable	GenAI is probabilistic	Intent & Assurance replaces specify-and-test
Change is episodic & gated	Agents act at machine speed	Dual governance: design-time gate + continuous runtime loop

Plus one new first-class concern: **trust, safety & accountability** — an agent can act, but a named human always answers for it.

The five domains and the method

BDAT + I — Business, Data, Application, Technology, and the new **Intelligence & Agency** domain (models, agents, orchestration, knowledge corpora, guardrails, evals, autonomy).

The blended workforce

Every capability is **allocated** to a human, an agent, or a hybrid team, at an **autonomy level** with a matching **oversight mode**. The boundary between human- and agent-performed work — the **automation frontier** — is mapped, planned, and moved only on assurance evidence.

AUTONOMY	AGENT DOES	OVERSIGHT
L0 None / manual	Nothing; a person performs	n/a
L1 Assisted	Drafts; human commits each action	In-the-loop
L2 Recommend-and-execute	Acts on low-risk, defers high-risk	In/on-the-loop
L3 Supervised	Acts in scope; human intervenes by exception	On-the-loop
L4 Bounded	Acts within an envelope without per-action review	Out-of-the-loop (within bounds)

What you get

- **Book 1 (the standard, ~400pp):** the thesis, the meta-model, BDAT + I, dual-audience principles, the method, and continuous governance.
- **Book 2 (the practice, ~370pp):** tailoring, adoption archetypes, playbooks, a worked end-to-end walkthrough, the nine artifact templates, and a traceability spine back to Book 1.
- **Nine new artifacts:** Agent Catalog · Model Portfolio · Knowledge-Corpus Catalog · Guardrail/Policy Catalog · Human-Agent RACI · Autonomy-Level Classification · Eval-Suite Specification · Trust & Accountability Matrix · Capability Automation-Frontier Map.
